CHEAT SHEET

Umami on one page

Everything you need while working with Umami 3.

RUN IT WITH DOCKER

```
docker compose up -d     # start
docker compose ps        # wait: healthy
docker compose logs -f umami
docker compose down      # stop, keep
data
docker compose down -v   # delete data
```

Dashboard: `http://localhost:3000`
First login: `admin` / `umami` — change it at once.

ADD TRACKING TO A PAGE

```
<script defer
  src="https://cloud.umami.is/script.js"
  data-website-id="YOUR-WEBSITE-ID">
</script>
```

Put it in `<head>` on every page. Find it under Websites → edit (pencil) icon. Route changes in single-page apps are tracked automatically.

TRACK A CLICK (HTML)

```
<button
  data-umami-event="Book stall"
  data-umami-event-stall="crafts">
  Book this stall
</button>
```

Event name: max 50 characters. `data-umami-event-*name*` adds a property. Attribute values are stored as text.

TRACK FROM JAVASCRIPT

```
umami.track('Reserve tickets');
umami.track('Reserve tickets', {
quantity: 2 });
// links sessions, so no longer
anonymous:
umami.identify('user-123');
```

Guard with `if (window.umami)` in case the tracker is blocked.

TRACKER OPTIONS (SCRIPT ATTRIBUTES)

`data-do-not-track="true"`	Respect browser Do Not Track
`data-domains="a.com,b.com"`	Only track on these hosts
`data-auto-track="false"`	Turn off automatic page views and events
`data-exclude-search="true"`	Drop query strings from URLs
`data-host-url="..."`	Send data to a different host

SERVER SETTINGS (ENVIRONMENT)

`DATABASE_URL`	PostgreSQL connection (required)
`APP_SECRET`	Random string securing logins
`TRACKER_SCRIPT_NAME`	Rename `script.js`
`COLLECT_API_ENDPOINT`	Rename `/api/send`
`IGNORE_IP`	IPs to ignore, e.g. your office
`SALT_ROTATION`	How often the session salt changes (default: month)

HOW A VISITOR IS IDENTIFIED

```
Session ID = hash(website ID + IP
                  + user agent + monthly
salt)
Visit ID   = hash(session ID + hourly
salt)
```

No cookie. IP used in the hash, not stored. New salt each month → no link across months.

WHAT THE METRICS MEAN

Visitors	Unique sessions (an estimate of people)
Visits	New visit after 30 min inactive
Bounce rate	Visits with 1 event ÷ visits
Visit duration	First to last event; multi-page visits only
Events	Actions, not people or purchases

QUICK FACTS

Licence	MIT, open source
Stack	Next.js, Prisma, PostgreSQL (v3: PostgreSQL only)
Requirements	Node.js 18.18+, PostgreSQL 12.14+
Hosting	Umami Cloud or self-hosted
Bot filter	isbot library, on by default
GDPR	Hashed IDs are still personal data (EDPB, 2025)

NOT SEEING DATA?

1. Website ID matches the dashboard?
2. DevTools → Network shows `/api/send`?
3. Ad blocker off for this site?
4. Date range includes today?
5. Hard refresh (`Ctrl+F5`) after editing HTML.
